## A Message With an Impact From Your Scientific Community!

### Science, Technology, Engineering, Arts, Math.

STE(A)M education is YOUR path forward regardless if you are a boy or a girl, your country of birth, skin color...to build your confidence, skills and knowledge to become an expert in a field that fires your curiosity the most. So why would you let any barrier get in front of you, holding you back?

Odd as it might sound to you at this point in your young life, but the successful people you see in the picture have experienced the needed ups and downs during their studies and professional careers but whatever it was that crossed their path, they never gave up on their passion and to become an expert in their field.

And you know what, if these people can do it, you can too!

# Sasquatch; Legend Meets Science

Idaho State University's Prof. of Anatomy and Anthropology, Jeff Meldrum weighs in on the evidence for the existence of Bigfoot. [Click Prof. Meldrum's Photo and listen to his TNT-Podcast](#)

The Lakota believed in a powerful, burly figure they called "Chiye-Tanka", or "Big Elder Brother". The Eskimos called it "bushman". The Colville Indians call him "Sasquatch" and the Hoopas of northern California call him "Omar".

In 1604, French navigator Samuel de Champlain ominously described a frightful monster, what bears the name "Gougou". In 1811, explorer David Thompson was hiking through the Rockies when

he stumbled upon some seriously massive footprints, while an 1884 edition of a British Columbia newspaper called 'The Daily Colonist' reported the capture of a young, gorilla-like primate called "Jacko." In 1924, a group of miners in Washington claimed to have been besieged all night long by a troop of hairy ape-man in a chasm now known as "Ape Canyon".

Is it a bear? Could it be some kind of giant ape or, some kind of ancient

hominid, a member of the human family like Neanderthals that were thought to be extinct or...could it be a hoax.

Bigfoot, Yeti, sasquatch... it strikes fear and the imagination. Is it real or myth and why hasn't anyone captured a Bigfoot. With all the leading technology scientists have today, why haven't they found definitive evidence?

[Click here](#) to visit Prof. D. J. Meldrum ISU Bio.

I am proud to say that, after 2.5 years, The Next Truth is known in 16 different countries!

Many thanks for all your eye-opening contributions, amazing support and incredible trust you have given the magazines in the past 2.5 years. I hope, together with you, to build an even more solid bridge in the upcoming years that reaches and connects young people globally!

## „I Analyzed All of Trump’s Tweets to Find Out What He Was Really Saying.“

Twitter, Facebook, LinkedIn ... the social media platforms are neither unfamiliar with us nor with those occupying the White House or government agencies in general. Its silent communication has crept into our daily activities.

But what are they really saying? Is there a hidden

message in, for instance, their tweets? Are these short messages truly influencing our thoughts? "In 2017, I began to collect all of his tweets, going back to June 16, 2015, the day he announced his candidacy", Assistant Prof. Michael Humphrey writes in his article.

"I kept at it until Jan. 8,

2021, the day Twitter permanently suspended his account. But in those 20,301 tweets I learned something more fundamental about how the 45th president of the United States used Twitter to tell his own story."

[Click the profile photo of Prof. M. Humphrey and visit his website.](#)

The eyes are often called 'the windows of the soul' as they can send many different non-verbal signals. But eye movements can mean a myriad of different things.

## The Body Language of the Eyes

An interesting fact you like to know about eye movements and body language is that there is a past and there is a future. And it really comes into play when you're asking someone questions.

When you're asking someone what did they do yesterday, you'll often see that their eyes will look to the left which is thought of being the past. If you're asking them what did they do yesterday and they're looking to the right (the future), you might have a clue that maybe they're making something up.

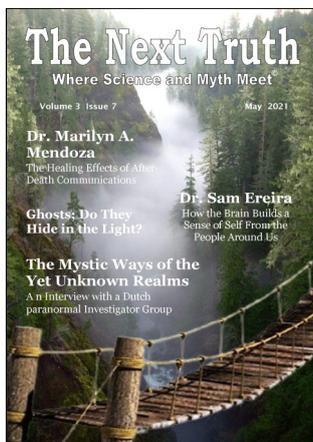

"I look at the eyes principally to tell me when someone is comfortable, relaxed or suddenly troubled by a subject or an event", former FBI Joe Navarro writes in his article *The Body Language of the Eyes: The eyes reveal what the heart conceals*.

"It is interesting to note in my own observations that when we are most comfortable we have the luxury of looking away and we find comfort there as we retrieve facts from our memory or ponder the future."

*Click on the profile photo of Joe Navarro and visit his website.*

**"The eyes serve as conduits of information we have relied on for thousands of years."**

## The May 2021 Edition of The Next Truth

### Can we cross the bridge of classical reality?

That is a tricky question. There are many plausible answers, and theories, aiming in plural and plausible directions. But regardless of how we wrestle with this question, in some enigmatic way, most of us end up with a form of "Platonic realism," which states that the "visible world of particular things is a shifting exhibition, like shadows cast on a wall by the activities of their corresponding universal ideas or forms."

Hard to endure but renowned scientists are trying to wrap their minds around this question of what this foggy state of the mind is. But is it really a foggy state we seem to be stuck in? Or, may we think of it as a strange kind of an overlapping of different frames of space and time where a primordial energy is forming its own density and, for us, creating recognizable objects in a 'reality'?

## A New Dutch Reiki Practice "Mystic Ways"

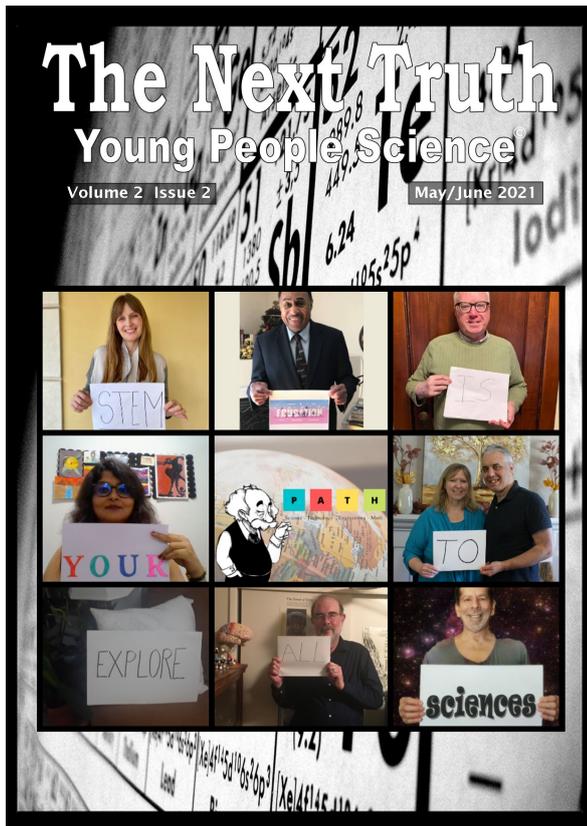

"Spiritual Healing runs in our family", Dutch Reiki practice Veronique Lamers says. "And, as far as I can remember, I always had a particular energy radiating from my hands what had a warm and tingling feeling.

Reiki is something what is woven in Veronique's heart and she really want to continue to practice and expand her abilities. This has awoken a deep need within her to take this

exciting new step of remodeling and furnishing a small but professional space in her home so that, once this terrifying virus, aka Covid, is reduced in its presence, she can receive people who will benefit from her spiritual healings.

*Click, or tap, the pendulum and visit Veronique's Face Book page "Mystic Ways". [Click here](#) to read the full article via The Next Truth website.*

## The Next Truth's Goal

"Young People Science" is created for you to let your excitement and curiosity explode every two months when reading your next issue. And, as we continue to evolve the magazine, we ask you to contact us when you have conducted a super fun experiment with your classmates, when you have visit an amazing exhibition with your school or maybe you have met a very famous scientist, just to name a few examples, so that we are able to meet and exceed your expectations.

Email The Next Truth your experiences, stories and photo's via [info@nexttruth.com](mailto:info@nexttruth.com) and we will publish it for you to show your parents, teachers and friends with the free PDF of the edition your work is published in. Or simply follow the links below and post your cool science on Facebook, LinkedIn and Twitter.

Follow Young People Science via Facebook:

## Is Learning How to Expand Our Consciousness the Bridge to Build Between the Human Mind and AI?

For a long time, humans have wondered whether machines could eventually achieve consciousness or, whether artificial intelligence would ever reach a state of self-awareness.

The exact definition of AI is hotly debated and there are already many fantastic explanations of AI on the internet but broadly speaking, AI is advanced statistics and applied mathematics which harnesses new advances in computing power and the explosion of available data to give computers new powers of inference, recognition, choice and, eventually, possessing an awareness of its own consciousness.

Will future AI really be able to do so? Well, the first thing that is important to understand is that all that exists, whether

seen or unseen, when it is broken down into its simplest and most basic form of energy, consists of a rate of frequency.

To begin to comprehend the nature of Consciousness, and to directly experience an 'Expanding Consciousness' through increasing ones personal frequencies, one must go beyond flat linear thinking, thought addiction and stop accepting everything one has been told by others as fact and truth.

Will AI be able to train its own 'mind', step into the realm of direct cognition and higher sensory perceptual experiences what then allows it to perceive things as they really are and not what it, perhaps, wishes them to be?

In an upcoming TNT-Podcast we are speaking with Partner & Trainer in accelerating thinking at Council for Human Development Swiss Association, Anna K. Hiltensberger and Founder, Director and CEO at Consciousness Coin, Kern Frost about how we can learn to expand our consciousness and, is this the future bridge to build between the human mind and AI?
